

## IT DEVELOPER

### Description:

Ktalysis provides IT services to Alternative Investments professionals in North America with a dedicated focus on public markets. Our mission is to support and advise financial organizations with their public markets initiatives from vendor selection, software implementation, to systems support or system enhancements.

### CORE ACCOUNTABILITY

We are looking for a well-rounded developer to join our emerging IT Solutions Consulting team. We are dedicated to having our developers expand their skillset and knowledge with training and experience working directly with clients. Our team is aimed at becoming leaders of technologies within the Finance world to bring about change like never done before, bringing innovation to our clients. You will be a major role in bringing up the new IT consulting team at Ktalysis Inc. to deliver the most cutting-edge technologies and solutions to clients all over the finance industry.

### PRIMARY RESPONSIBILITIES

A fast learner of technologies and able to adapt to any environment

Resourceful and willing to learn and tackle challenging problems

A team player and also able to work independently

A well-rounded individual, jack of all trades working to be master of all

### Skills include:

Best practices and principles for web application development

Ability to design, implement, test and deploy a project to completion;

5 years of experience with web hosting and release management;

5 years of database experience: MongoDB/SQL/relational & non-relational databases;

Familiarity with code base version control best practices: Git

Degree in Computer Science/Engineering or related field;

Javascript (Node, Angular, React);

Java;

C++/C#;

HTML/CSS;

Big Data experience is a plus.
